

MICROSCOPE

Series Concept & Pitch Deck

FORMAT: TV Series

GENRE: Crime, Medical Thriller, Dark Comedy

THEMES: System Exploitation, Morality vs. Science, Perfect Crimes

LOGLINE:

After discovering a dark web assassination market, an unemployed tech-savvy man forms a flawless partnership with his new neighbor—a doctor with flexible morals. Their deadly business model: selecting targets exclusively from chronic patients and manipulating their medical conditions to make every murder look like "natural causes."

THE SYSTEM'S MECHANICS

For the audience to be captivated by this duo, the logic of the murders must function flawlessly. This section outlines the core procedural template placed into every episode:

1. MATCHING (THE INTERFACE): The Hitman downloads the list of targeted individuals from the dark web contract killing platform.

2. SCANNING (THE DATABASE): The Doctor covertly accesses the hospital's central medical records database to filter these targets, looking for vulnerabilities: medical histories, severe allergies, active prescriptions, and chronic illnesses.

3. PLANNING (THE DESIGN): The Doctor acts as the architect, designing a fatal scenario that perfectly triggers the victim's existing condition. (e.g., injecting a different gas into an asthma inhaler, generating a specific magnetic field to disrupt a pacemaker, or secretly exposing someone to a lethal allergen).

4. EXECUTION & APPROVAL: The Hitman executes the plan with clinical precision. The victim suffers a "natural" medical emergency and dies. Only an ambulance is called, not homicide detectives. Autopsies are rarely performed on chronic patients dying of known complications. A discreet photo is taken, and the payment is transferred in Bitcoin.

CHARACTER DESIGNS

The Hitman (Protagonist)	Unemployed but possessing high analytical intelligence, he enjoys finding loopholes in systems. He is not inherently violent or physically imposing. He commits murders with the cold detachment of a technician following the Doctor's "prescriptions." He is pragmatic, sarcastic, and calculating.
The Doctor	On the outside, a respected specialist saving lives. On the inside, he is thoroughly disillusioned by the corrupt healthcare system. Exhibiting high sociopathic tendencies and a growing God complex, he views the human body merely as a machine waiting to be dismantled.
The Antagonist	A Life Insurance Investigator or an obsessive hospital data analyst. While the police suspect nothing, this character begins to notice a statistical anomaly—an impossible cluster of sudden deaths among chronic patients in a specific demographic, slowly closing in on the duo.

STORY ARC (SEASON OUTLINE)

ACT I: INTRODUCTION & PARTNERSHIP

Hitting rock bottom, our protagonist discovers the dark web site, initially dismissing it as a game or a scam. The narrative shifts when the Doctor moves in next door. Upon learning his neighbor's profession, a lightbulb goes off: *"What if the targets are already dying?"* They execute their first hit—highly risky, but it works flawlessly.

ACT II: ESTABLISHMENT & CONFLICTS

The duo operates like a corporate startup. The money flows in, and they upgrade their lifestyles. However, cracks begin to form. First, "traditional" hitmen on the dark web notice this mysterious newcomer's 100% success rate and complete absence from police radars, drawing unwanted attention from the underworld. Second, the Doctor's ego inflates. He attempts to bypass the system to kill a personal enemy by framing it as a contract, deeply angering the Hitman who insists that breaking their own rules means getting caught.

ACT III: CLIMAX & FINALE

A new target is posted on the dark web. The victim turns out to be someone deeply loved by either the Hitman or the Doctor, or it is the very Insurance Investigator who is perilously close to exposing them. The flawlessly functioning "natural death" system is on the verge of imploding. In the explosive finale, the Doctor and the Hitman turn on each other. Who will survive the final diagnosis?

Concept Note: *The title "MICROSCOPE" is dual-layered. Not only do they examine their targets on a microscopic level (diseases, viruses, biology), but as the story progresses, their own lives, sanity, and fragile partnership are placed under a microscope for the audience to dissect.*
